

Rainbow Bridge is the greatest among the known natural bridges of the world and is unique in that it is not only a symmetrical arch below but presents a curved surface above, thus roughly imitating the arch of the rainbow for which it is named. It is referred to in Indian mythology as "Nageelid Nonnezohi," "Rainbow Arch." Its dimensions are 309 feet in the clear from the bottom of the gorge and 278 feet from pier to pier. Some idea of this size may be had when one realizes that it would span two of Salt Lake's wide streets, and with the "Mormon" Temple placed under it, there would be about one hundred feet to spare.
